Through the green policy at Careys Manor a number of initiatives have been introduced to reduce the consumption of utilities. These include a green tariff which ensures electricity used in the hotel is supplied from renewable wind farms, reverse air cycle air conditioning installed into 75% of bedrooms and all conference suites which allows for a more efficient room temperature control, water butts used to recycle rain water for use on the gardens and window and door sensors installed in all rooms with air conditioning so when open, the unit is inoperable.

Careys Manor Hotel & SenSpa actively encourages the use of local suppliers for the provision of ingredients used on the menus of the three restaurants on site. As a

result of this, the hotel can be sure they are doing their bit to support the local economy, whilst also ensuring the maximum levels of sustainability. In addition to selecting local suppliers to provide the food for customers, the hotel also requests that suppliers take back and re-use all packaging where possible.

All products used within the SenSpa facilities are sourced from only the finest local, natural ingredients. Free from damaging chemicals and packaged in bio-degradable packaging, the hotel aims to minimise its effect on the local environment and that of the environment further afield.
