**Website:** www.greenoakframed.co.uk

BespOak is a family run business which specialises in the manufacture of high quality green oak timber frames. The products provided include a wide range of sizes and as the name of the business suggests are built around the requirements of the individual customer.

Beyond the physical building, they also offer guidance on project management and planning ensuring that the entire build process is smooth and stress free for the end user.

To date they have worked on projects throughout Hampshire, Surrey and Devon including holiday homes, porches, garages and garden rooms.

The business has developed an extensive website detailing the services offered along with a history of the projects completed. This is complemented by their social media feeds across a range of platforms which allows followers to view projects being worked on and/or completed.

As a carpenter, business partner Richard has substantial experience in oak framing and started his own business with the help of other family members that will deliver to customers on time a high quality oak frame at a competitive price.

The business plans to recruit an apprentice in the coming months to help spread the workload and allow Richard's skills to be transferred to an individual who will take the business forward in the longer term.
