

The Eric Robinson Award for Young Person in Business

Harry Glover

Business: ExxonMobil

Harry Glover has worked for ExxonMobil since 2015. He developed a passion for chemistry which led to his role in chemical engineering. Harry completed a summer placement at Fawley Refinery and graduated from Cambridge University with a First Class Masters in Chemical Engineering.

He is currently looking at aspects of his work in more detail and through the support of his peers is able to do this at a far more intricate level. The technology he is learning about is very niche to the sector.

Harry has the initiative to be able to work independently to create and develop areas of work. He is able to see a gap in their methods or notice an opportunity to improve something within the business. Ideas that he has brought to life are being used within the company today and without him working for the business these projects wouldn't exist.

The health and safety of himself as well as his fellow co-workers is his top priority. Harry creates a good relationship with his co-workers so they can get the work done efficiently. He works hard at his passion in life.

Harry has worked in many roles at ExxonMobil such as Development Engineer, Contact Engineer and Improve Engineer. From November 2018 he moved on to a Business Analyst role which involves financial reporting and targeted data analysis to support stakeholder decision making.
